TECHNOLOGIES USED

Git   Bash   npm   Jira   Jest   JavaScript   Python   Webpack   Docker   AWS   Heroku

PERSONAL PROJECTS

SmartBrain
- A responsive web app that combines React, Node, Express, and PostgreSQL to create a beautiful and interactive facial recognition app utilizing the Clarifai API. (HTML5, CSS3, JavaScript, React, Node, Express, SQL)

KeystoneGuru
- Contributor to this World of Warcraft-based open-source project built with Laravel using jQuery, PHP and MySql. Users can build and find routes for Mythic Plus content. (JavaScript, jQuery, PHP, Laravel, SQL)

Robofriends
- An interactive web app built with React, Redux, and Tachyons. Built this React app to get familiar with the library using components and state management. (HTML5, CSS3, JavaScript, React, Redux, Tachyons)

Cat Website
- A fun first website about my cat, Kenny. Uses basic HTML, CSS and Bootstrap. Learned about the basic building blocks with the help of the MDN web docs. (HTML5, CSS3, Bootstrap 4)
